

# UC Edge

Designed for choice. Built for change.

## Why UC Edge?

Global communications have become complex. Multiple platforms. Multiple vendors. Growing risk.

Cloud migration, regulatory pressure and platform change mean enterprise voice can no longer be tied to a single solution.

## What is UC Edge?

UC Edge is BT's **cloud first, global voice control layer**. It allows organisations to run voice **across every communication platform** through **one BT managed solution**.

No re contracting.

No re engineering.

No disruption.

## What problems does it solve?

- Platform sprawl and vendor lock-in
- Risk and downtime during migrations
- Complexity across regions, regulations and providers
- Slow change driven by legacy architectures

Can we  
talk?

## What makes UC Edge different?

### **Freedom of choice**

Run multiple UC platforms today - change tomorrow without rework.

### **Zero-friction migration**

Move users and numbers without porting, downtime or commercial resets.

### **Operational simplicity**

One global voice layer. One contract. One model.

### **Resilience & compliance**

Built-in continuity, intelligent routing and local regulatory support.

## How it works

UC Edge is BT's cloud-first enterprise voice platform that lets organisations run voice anywhere, across any collaboration platform, through one BT-managed solution. Designed for choice and built for change, UC Edge removes the complexity that gets in the way of communication - cost, risk, compliance and continuity. Move users, numbers and services between voice services with no porting, no downtime and no commercial resets. UC Edge keeps your global voice layer flexible, so your collaboration strategy can evolve freely and at your own pace.
